metadata

datasets
lab and author information; usually one study

administrations
a subject completing a specific experiment

subjects
an individual participant, who may contribute to multiple administrations

stimuli
a (word, image) pair; the label can be in various languages or can be novel

trial_types
combinations of target and distractor stimuli seen in the experiment

aoi_region_sets
position information about AOIs

trials
a mapping between trial types and trial ordering

time series data

aoi_timepoints
coded looking behavior over the course of each administration of the experiment

xy_timepoints
raw looking behavior over the course of each administration of the experiment
